

Duraklick

EW

Mounting system East-West

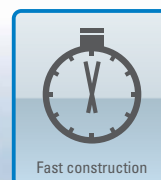

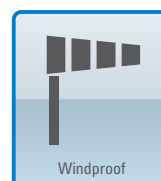

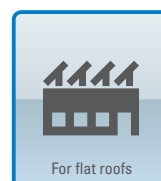

The **Duraklick-EW** mounting system is designed for maximum yield and optimal use of area. It gives the most uniform yield on flat roofs and stands out with its top price-performance ratio.

What further sets this system apart are its superior Duraklick properties, such as simple assembly, our click system, and its lightweight aluminium structure. With its inclination of 10° it is ideally suited for roofs with membrane or bitumen surfaces because it is installed without roof penetration; the additional load applied to the roof is either small or negligible.

Outstanding features:

- ▶ easy and safe
- ▶ corrosion-resistant and statically tested
- ▶ approved by the German Institute for Building technics
- ▶ Made in Germany

EW

Mounting system East-West

EW 100/10

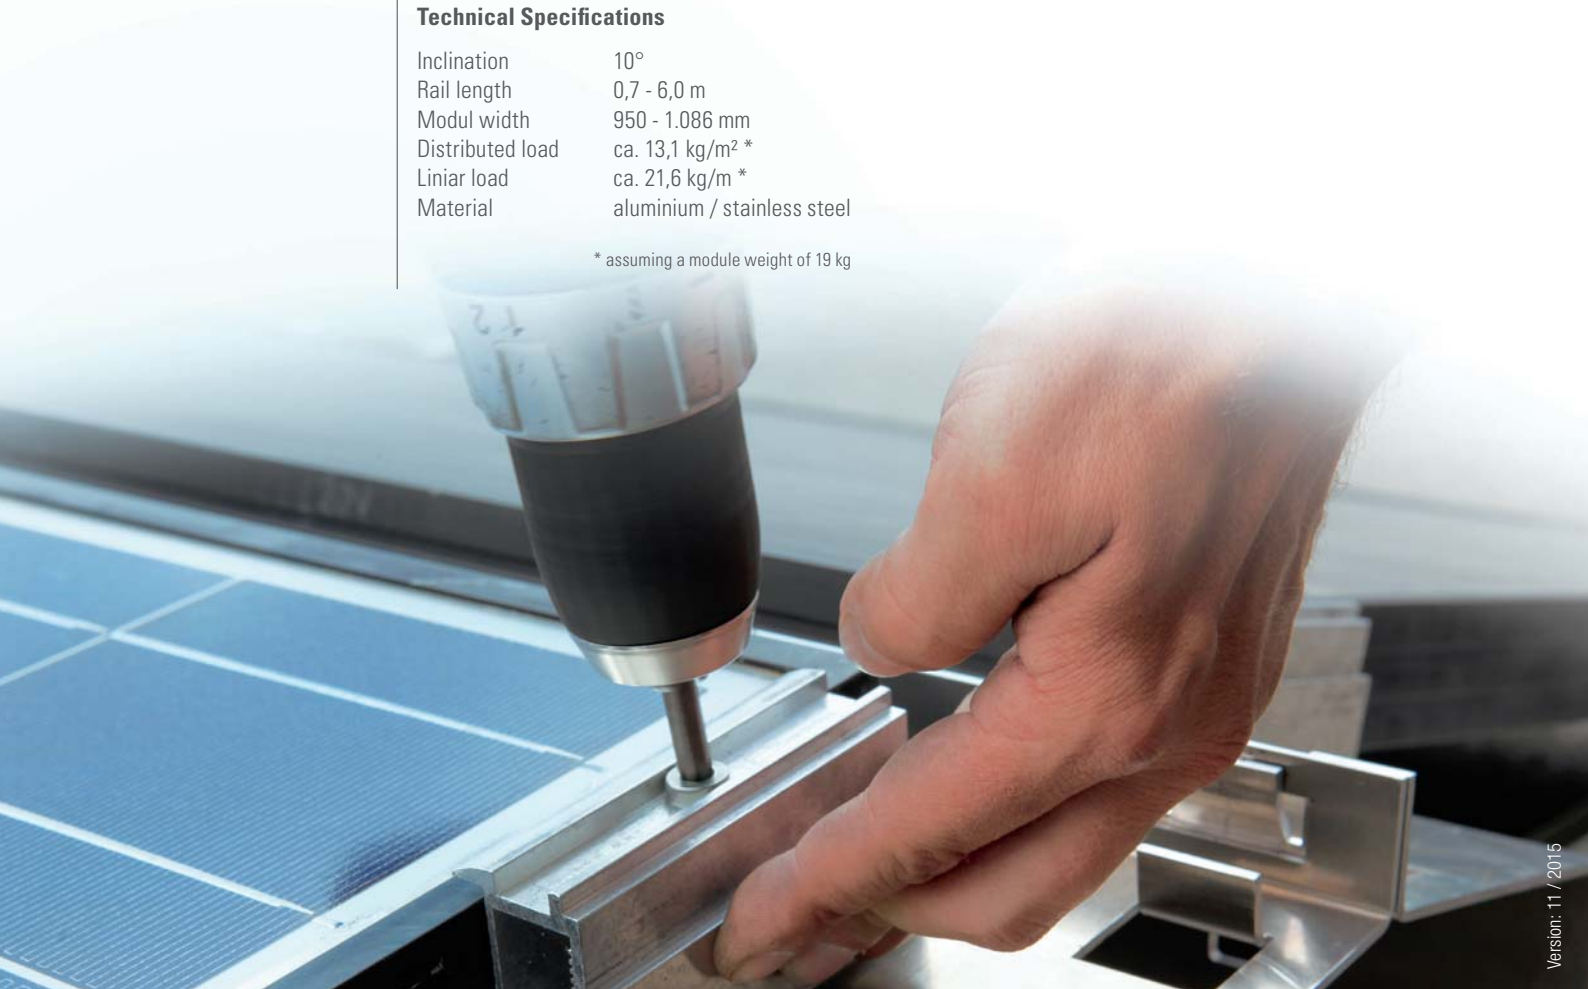

... suitable for photovoltaic-modules with a width of 950 - 1.086 mm. Inclination 10°

Technical Specifications

Inclination	10°
Rail length	0,7 - 6,0 m
Modul width	950 - 1.086 mm
Distributed load	ca. 13,1 kg/m ² *
Liniar load	ca. 21,6 kg/m *
Material	aluminium / stainless steel

* assuming a module weight of 19 kg

Version: 11 / 2015
